INTRODUCING THE FIRST COMPANY THAT UNITES EVERY VIRTUAL SERVICE YOU NEED TO SIMPLIFY BUILDING MANAGEMENT NATIONWIDE

About Us

VirtualWay® is the first company to provide a complete suite of virtual services that can increase income by commanding higher rents, while decreasing costs. VirtualWay® was founded by a group of New York based service professionals with extensive experience in the fields of technology, physical security, real estate, marketing and customer service. Amenities attract residents. VirtualWay®'s services are an amenity that doesn't involve sacrificing square footage, hiring staff or calling a contractor.

Why VirtualWay®?

■ VirtualWay®'s services were designed by experienced professionals who understand the needs of a building and its managers from the inside, making it versatile and easy to use.

■ Our cloud based software allows managers and residents to keep track of service requests and communications from any desktop or mobile device.

■ VirtualWay®'s Virtual Front Door and Virtual Gatekeeper services include our VirtualWay360 building management software that integrates communication and management tools for multiple buildings into one screen at no additional cost.

■ Customer service is our number one priority. We are available 24/7.
There is no fine print.

We Offer Value and Convenience

Virtual Way®'s innovative services offer buildings unparalleled value and convenience. We bring safety and peace of mind to busy residents.

Step Ahead of the Competition

Attract quality tenants with unprecedented luxury services

Increase the safety, efficiency and value of your properties

Reduce operating costs

Virtual Front Door Service

A doorman who never sleeps!

Our Virtual Front Door service is like having a doorman who never sleeps. The Virtual Front Door service works 24/7, receiving packages, notifying residents and screening and receiving any visitor to your building. It is effective on its own, but can also be cost effective when used in conjunction with a traditional doorman as additional support or to cover other shifts.

Virtual Gatekeeper Service

Our Virtual Gatekeeper service saves money for gated communities while improving safety and convenience for residents. Like our Virtual Front Door service, the Virtual Gatekeeper accepts packages and deliveries, notifies residents and screens all visitors to your gated community. Our cameras, installed in strategic locations will monitor all vehicles that enter or leave the premises around the clock, increasing safety and decreasing costs.

Building Monitoring

Put eyes in your blind spots.

Increase your building's safety with Virtual-Way®'s Building Monitoring system. Virtual-Way® will set up cameras in strategic locations according to your building's needs then track them 24/7 from our central monitoring station. If anything suspicious or unusual occurs, VirtualWay® will immediately alert building management and the proper authorities. Monitoring can be done with traditional cameras that provide a video feed to our central monitoring station. Another option utilizes IP cameras with 2 way audio feed that allows our staff to speak with whoever is in the area being watched to control the situation.

Panic Button & Follow Me Services

As part of our building monitoring service, we can provide these services to add an extra layer of peace of mind for residents. The Panic Button is placed in the lobby. If a resident feels that someone is in the building who shouldn't be or feels threatened in any way, they can press the panic button, which will activate a camera with two way audio, that will allow us to speak with the resident, evaluate the situation and take appropriate action.

The Follow Me service uses strategically placed cameras to "follow" residents to remote areas, like a parking lot or garage upon their request or to give them a greater sense of security as they enter the building or use the laundry room.

Rest assured – VirtualWay® has your back!
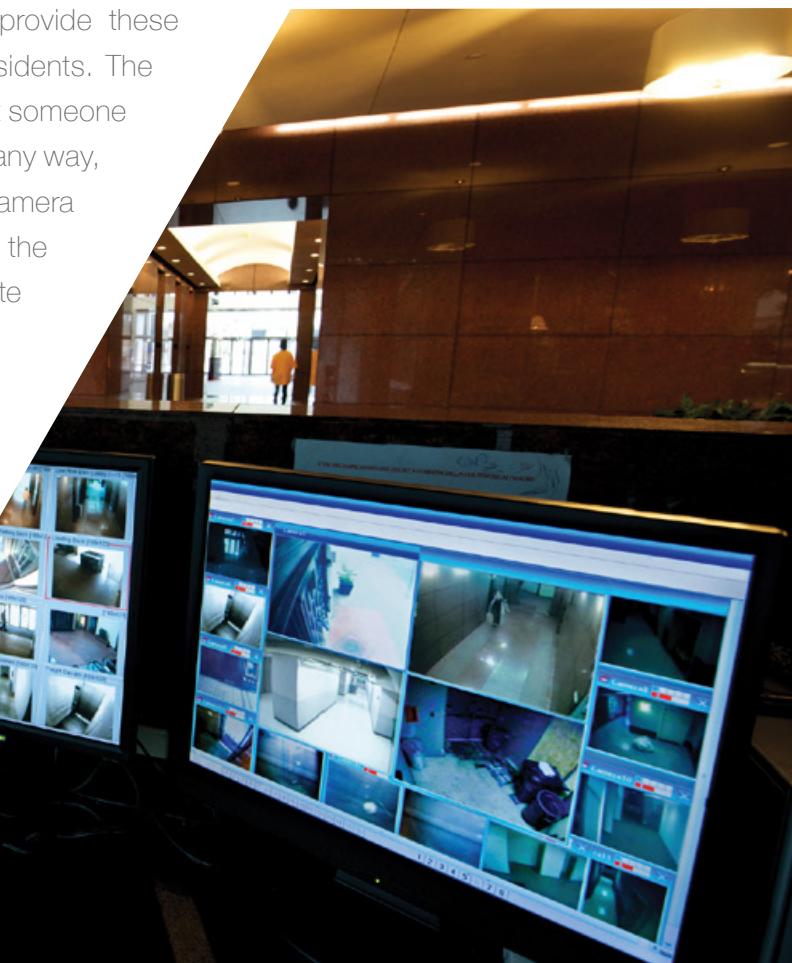

VirtualWay360 Building Management Software
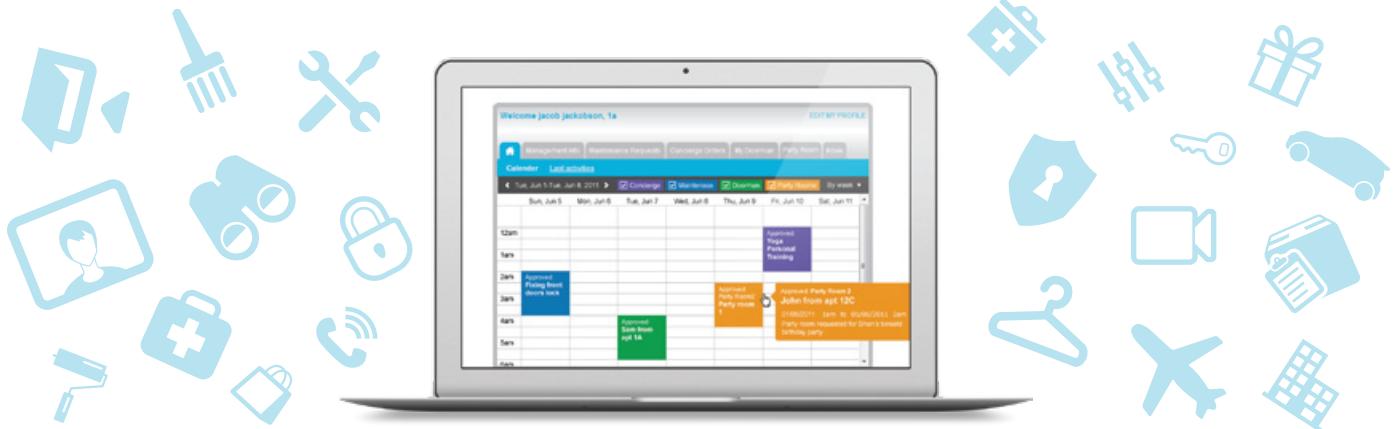

VirtualWay360 is a full service building management program that puts all the information you need at your fingertips. You can manage multiple buildings from a single control panel that's easy to use. Our cloud based software makes it easy to keep track of building issues and communications from any desktop or mobile device, and you don't have to worry about what would happen if your computer crashed.

No more hunting for phone numbers. The built-in messaging inbox lets you organize and execute daily tasks or keep track of current projects whenever and wherever it's convenient for you. Manage maintenance requests, post building announcements and more without picking up your phone or logging in and out of different programs.

VirtualWay360 Building Management Software can be purchased on its own, but it's included at no extra cost with our Virtual Front Door and Virtual Gatekeeper services.

Virtual Concierge Service

Give your residents the convenience of living in a luxury hotel with our virtual concierge service. Residents access the service through our website and can order a wide variety of services delivered to their home from their computer or mobile device. They pay via credit card online and they are ready to go. Getting a wide variety of services in the comfort of home is no problem with Virtual-Way® Virtual Concierge Service.

Facial Recognition Access Control Software

No Codes, No Cards, No Keys

Facial recognition software is an advanced method of authentication for access systems. This technology is rapidly becoming much more popular and widespread.
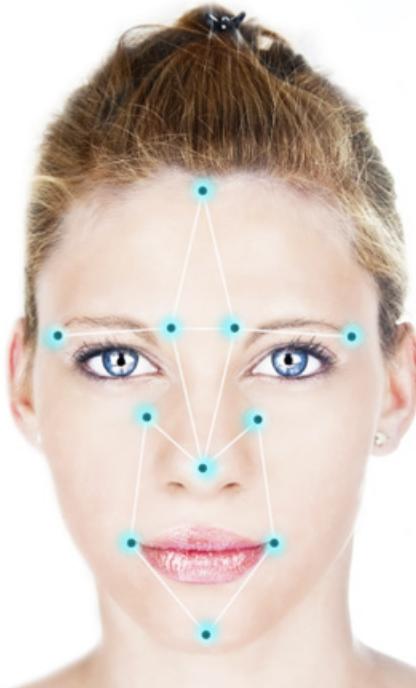

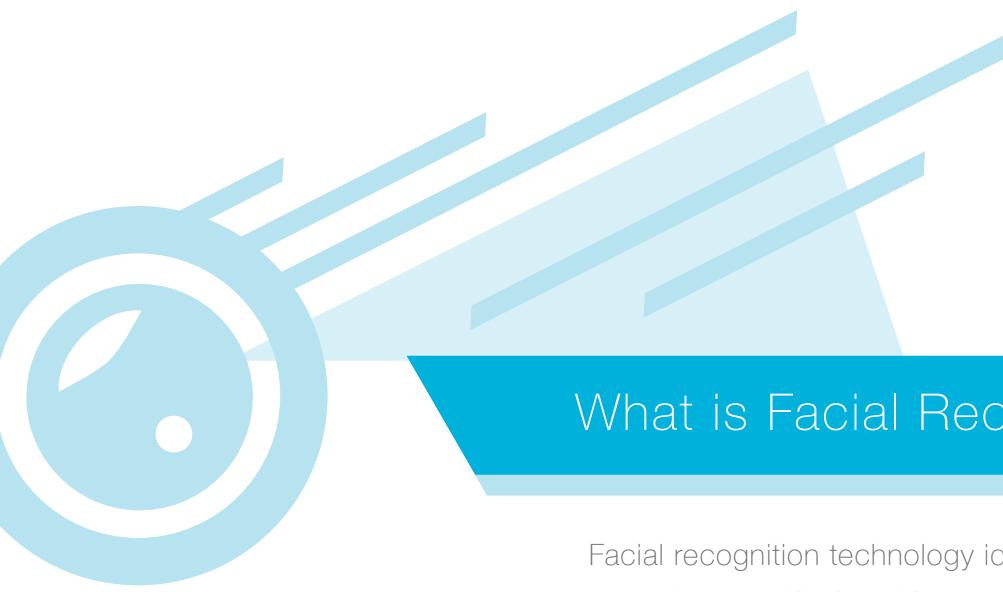

What is Facial Recognition Technology?

Facial recognition technology identifies or verifies individuals by analyzing specific facial features and comparing a live person with stored photos of each resident.

How Does it Work?

Facial recognition software analyzes the characteristics of a person's facial images input through a digital video camera. It measures the overall facial structure, and specific features, such as distance between the eyes, nose and jaw-line, retaining these measurements in a database to be used as a comparison when a person stands before the camera. If it's a match, the door is opened for the resident. This biometric system is fantastic for access control.
