## Your electric use over time

Account Number: 1001-2305-693

Your electricity use for this month has **decreased** compared to the same month last year. However, this past year you used **\$722 more** than the average home in your area. Find new ways to save in this report.

## How can I save more?

**Save up to \$152/year**

**Maintain your ducted heating and cooling systems**

Routine maintenance can extend the life of your ducted heating and cooling system and save energy. Clean or replace the filters regularly, and work with a contractor to check for and repair leaks in your ducts and to schedule your annual tune-up.

**Save up to \$16/year**

**Seal air leaks where pipes and wires enter your home**

The holes where pipes, wires, and ducts enter your home are often left unsealed. These holes in your home are a source of air leaks and can be an entry point for animals and bugs. Sealing around the pipes, wires, and ducts is a low-cost way to lower your energy bills and make your home more comfortable.
